

A: Print

Welcome to the Arlington HSPC! Let's make sure your computer and editor are working and you know how to submit a problem. For this sample problem, you should write a program that outputs the text "Hello, world!"

Input

This problem has no input

Output

Your program should output the text "Hello, world!" without quotes.

Sample Input

Sample Output

```
Hello, world!
```

B: Compare

We're going to make things a little harder for the second sample problem. This problem has an input, but luckily, our sample code does all the parsing for you! Your code just has to return the correct response. However, for some problems you may have to print the response yourself.

Input

Your input will be 2 numbers each on their own line. The numbers will be in the range from -100 to 100.

Output

Print out the larger of the two numbers on its own line.

Sample Input

```
1
2
```

Sample Output

```
2
```
